Subtracting Integers

What You'll Learn

To subtract integers and to solve problems by subtracting integers

Why Learn This?

You can subtract integers to find changes in the depth of vehicles or creatures underwater.

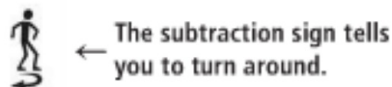

You can use a model to subtract integers. On a number line, the subtraction operation tells you to turn around and face the opposite direction.

EXAMPLE Using a Number Line to Subtract

- 1 Use a number line to find $3 - (-2)$.

Start at 0. Face the positive direction.
Move **forward 3 units** for 3.

Then move **backward 2 units** for -2 .
You stop at 5.

So $3 - (-2) = 5$.

1 EXAMPLE Use a number line to find $4 - (-4)$.

Start at 0. Face the positive direction.
Move **forward 4 units** for 4.

For subtraction, turn around.
Then move **backward 4 units** for -4 . You stop at 8.

So, $4 - (-4) = 8$.

1. Find $5 - (-1)$?
A. 6
B. 4
C. -4
D. -6

2. Find $-3 - 3$?

A. -6

B. -3

C. 3

D. 0

Subtracting an integer is the same as adding its opposite.

$$3 - 2 = 1 \text{ and } 3 + (-2) = 1$$

KEY CONCEPTS Subtracting Integers

You subtract an integer by adding its opposite.

Examples:

$$\begin{array}{ll} 10 - 6 = 10 + (-6) & 10 - (-6) = 10 + 6 \\ -10 - 6 = -10 + (-6) & -10 - (-6) = -10 + 6 \end{array}$$

EXAMPLE**Subtracting Integers****2****a.** Find $-8 - (-3)$.

$$\begin{aligned} -8 - (-3) &= -8 + 3 && \leftarrow \text{To subtract } -3, \text{ add its opposite, } 3. \\ &= -5 && \leftarrow \text{Simplify.} \end{aligned}$$

b. Find $-2 - 7$.

$$\begin{aligned} -2 - 7 &= -2 + (-7) && \leftarrow \text{To subtract } 7, \text{ add its opposite, } -7. \\ &= -9 && \leftarrow \text{Simplify.} \end{aligned}$$

a. $-5 - (-7)$

$$\begin{aligned} -5 - (-7) &= -5 + 7 && \leftarrow \text{To subtract } -7, \text{ add its opposite, } 7. \\ -5 + 7 &= 2 && \leftarrow \text{Simplify.} \end{aligned}$$

b. $-9 - 6$

$$\begin{aligned} -9 - 6 &= -9 + (-6) && \leftarrow \text{To subtract } 6, \text{ add its opposite, } -6. \\ &= -15 && \leftarrow \text{Simplify.} \end{aligned}$$

1. Find the difference.

$$-6 - (-2)$$

A. -8

B. -4

C. 4

D. 8

EXAMPLE

Application: Submarines

3 The submarine *Alvin* was 1,500 feet below sea level ($-1,500$). Then it moved to 1,872 feet below sea level ($-1,872$). How far did *Alvin* move?

Find $-1,872 - (-1,500)$.

$$\begin{aligned} -1,872 - (-1,500) &= -1,872 + 1,500 && \leftarrow \text{To subtract } -1,500, \\ & && \text{add its opposite.} \\ &= -372 && \leftarrow \text{Simplify.} \end{aligned}$$

Alvin moved down 372 feet.

3 EXAMPLE Juan owes his sister \$14. She told him to subtract \$8 of what he owes if he feeds the dog. Write an integer to show how much money Juan will owe if he feeds the dog.

Find $-14 - (-8)$.

$$-14 - (-8) = -14 + 8 \quad \leftarrow \text{To subtract } -8, \text{ add its opposite.}$$

$$= -6 \quad \leftarrow \text{Simplify.}$$

The integer -6 shows that Juan will owe his sister \$6.

Rewrite each difference as a sum.

3. $-10 - 3$
- A. $10 + (-3)$
 - B. $-10 + 3$
 - C. $-10 + (-3)$
 - D. $10 + 3$

Rewrite each difference as a sum.

4. $2 - (-8)$
- A. $-2 + 8$
 - B. $2 + (-8)$
 - C. $2 + 8$
 - D. $2 - (+8)$

Rewrite each difference as a sum.

5. $-1 - (-3)$
- A. $1 + (-3)$
 - B. $1 + 3$
 - C. $-1 + 3$
 - D. $-1 + (-3)$

Extra practice problems.

Use a number line to find each difference.

6. $7 - 4$

7. $4 - (-5)$

8. $3 - 8$

9. $-1 - 6$

10. $-2 - (-3)$

11. $-4 - (-1)$

Power down your clickers and put them away.

You have an assignment worksheet. You may find your numberlines and stickpeople helpful to complete the worksheet.

Reteaching 11-4

Subtracting Integers

To subtract an integer, add the opposite.

Example 1: Subtract $5 - 8$.

Add the opposite: $5 + (-8)$

$$5 - 8 = -3$$

Example 2: Subtract $2 - (-4)$.

Add the opposite: $2 + 4$

$$2 - (-4) = 6$$

Use a number line. Find each difference.

- | | | |
|----------------------|----------------------|------------------------|
| 1. $3 - (-6)$ _____ | 2. $2 - (-4)$ _____ | 3. $-1 - 2$ _____ |
| 4. $-3 - (-5)$ _____ | 5. $-8 - (-3)$ _____ | 6. $4 - (-4)$ _____ |
